:Face[.]java is an Open Source Library built to work in the Java programming language, which is a general purpose, object-oriented programming language. The program can be used for a wide range of tasks. Face[.]java can be used to generate avatars, for the purpose of replacing or enhancing avatars in a large scale game or application. It can also be used for training facial recognition systems. The program is a simple, but powerful tool to help you blend the faces of two or more subjects together. The program is capable of blending faces in many ways, such as - blending one face into the other, matching several faces together, or even adding some facial attributes to a face. The program uses a novel combination of tools from the fields of computer vision and mathematics to achieve its goals, and can be used in many different fields of research, including data visualization, security, social media, photography, among others. Programming Language: JavaLanguageName:
